Dear Dr. Piray Soodipithan,

I have to start this letter by thanking you from the bottom of our hearts! It feels like we have woken up from a nightmare!

When my mother in law, Mrs. Bhanuben Solanki, was detected with the malignant melanoma of the anal rectum in stage IV, she was operated and the tumor was removed in November end. And the tumor was back in January bigger than it was in November. We had enquired in Netherlands, America and Mumbai about possible medications but every doctor came back with the same response- -there are no hopes and the maximum time for her to live was 5-6 months. There is no known cure for this type of cancer in Allopathy. Even chemotherapy and radiation have no effect on the tumors for this cancer.

Through my brother in law, we enquired with you and to our shock and disbelief, you said you could cure it!

Three months after beginning the medicine, we didn't know we were to realize the miracles of Siddha medication. To the utter shock of the surgeon who had operated on her, the tumour was no longer visible in the sonography and the patient had begun to feel better and was living a normal life in the house in just three months of taking the medications and following the diet very strictly as per your instructions.

I would strongly recommend everyone to follow the medications and diet of Siddha medication.

We are blessed to have such knowledge in our country and to have people like you who are truly serving humanity with their knowledge and not taking undue advantage of situations to make money like most corporates.

No amount of thanks can really repay saving a life!

I wish you all the best and I hope that this medication receives its due acknowledgment!

Mamta and Nilesh Anand
